Cargo Floor cover, no dirt on your cartridges anymore!

Dear customer,

We would like to inform you beforehand that very soon the Cargo Floor systems will have a new cover mounted at the rear of the control valve, this will be the new standard.

The new cover offers even better protection against pollution of the solenoids and cartridges. Next to the general protection of the valve this new cover is equipped with an extra lid at the bottom side that will fully stop spattering road dirt. This lid can simply be opened without tools in order to operate Cargo Floor's manual control (red button) if necessary.

This new cover is made of high quality ABS reinforced plastic and is fully, and without adjustments, interchangeable with the previous cover. Therefore this one will not be supplied anymore.

If wished this new cover can be ordered separately, the article no. of this new cover is 7371051. This in order to replace the previous model.

Trusting to have informed you sufficiently, we remain,

With best regards,

Cargo Floor B.V.
