New Cargo Floor identification plate

Dear customer,

We would like to inform you that our identification plate, on which the system number is mentioned, has changed.

The system number as of now will only consist of numbers, the letter designations have been removed.

General extended identification plate

Next to the system number the Cargo Floor order number will be mentioned and a field with 9 digits has been added in which we can, if required, put your identification or order number.

Numbers are automatically provided with a barcode; this make it possible for you to scan the required data.

Short small identification plate

For some years now an extra identification plate has been mounted near the standard supplied pressure filter so the system number can be read simply and swiftly at the outside of the trailer.

This identification plate now also mentions a barcode next to the Cargo Floor system number.

Paint and dirt protection

The identification plates are specially fitted with a double layer of transparent protective foil. The first protective foil has a lip with remains visible when the Cargo Floor system has gotten painted or exceptional dirty. This protective foil can simply be removed so the data is readable again and the second protective foil remains intact so the data remains protected. This means that you do not have to cover up the identification plate if you decide to preserve the drive units extra, both foils normally do not need to be removed.

In the attachment you will find an example of the new identification plates and their corresponding locations.

Trusting to have informed you sufficiently, we remain,

With best regards,

Cargo Floor B.V.

Coevorden, The Netherlands
