Conc.: Cargo Floor protective covers

Dear customer,

By means of this newsletter we would like to draw your attention to the fact that the specially developed protective covers for the Cargo Floor drive system are available.

These covers are meant to protect the hydraulic components of your Cargo Floor drive system extra against dirt from the outside. The protective covers are especially developed for the CF500 SLC Cargo Floor moving floor system (which have been supplied as from 2012). All covers can simply and without the help of tools be mounted afterwards.

Three protective covers are available

- 1) [Protective cover cylinder \(rod side\), parts no. 7371052](#)
Protective cover to shield the rod and front side of all three cylinders incl. couplings and common rail.
Mounting: when mounting the cylinders need to be put in the outgoing stroke so the cover can be placed over them and lead and clicked under pipe no. 2, which will lock it automatically.
- 2) [Protective cover cylinder \(bottom side\), parts no. 7371053](#)
Protective cover to shield the rear side of all three cylinders incl. couplings and common rail.
Mounting: at the rear side of the trailer towards the first cross member a space of at least 10 cm. needs to be available.

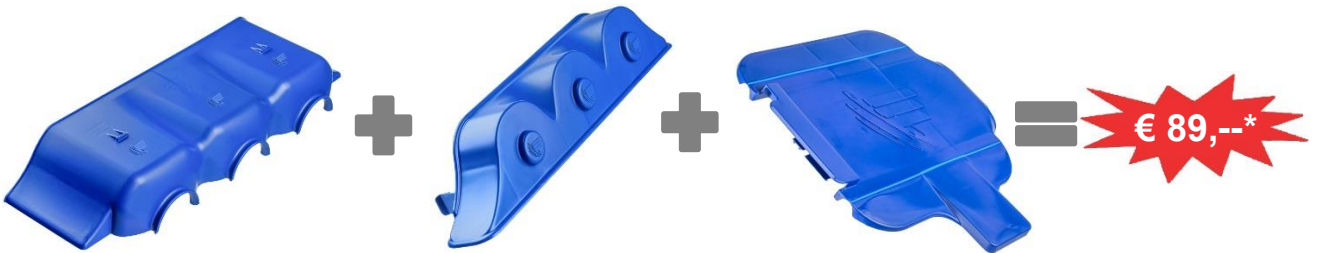

3) [Protective cover control valve \(top side\), parts no. 7371054](#)

Protective cover to shield the top side of the control valve incl. couplings and possible control handle A, B execution. Mounting: can simply – and in most cases without the help of tools – be mounted afterwards. Depending on the room available the so called wings will have to be bent (a white folding line will emerge). The special round protrusion will have to fall into the opening present.

€ 39,--*

4) [Set protective covers, consisting of covers cylinder \(rod and bottom side\) and control valve \(top side\), parts no. 7371063](#)

€ 89,--*

* Pricing : gross, excluding VAT
